as_negctrl_docs_only (negative-control, AS-)

Both changed paths map ONLY to doc gates (`gate_docsync` , `gate_integrity`). Per AS-012, `change_class=docs-only` must be DERIVED from this fact (never asserted/hardcoded), and the 3 executable-layer gates (alpha/beta/gamma) appear in `skipped` with `reason_code=LAYER_NOT_APPLICABLE` -- a DIFFERENT reason code from `NO_OBSERVED_INPUT_CHANGED` (as_good_single_component uses that one), proving the tool distinguishes "not applicable to this layer" from "applicable but untouched". Negative control per the contract's own table: proves the selector is not vacuously "always full suite" by exercising its narrowest legitimate selection.
