ga_good_transfer_proof (DEC- golden-good)

Removing `TOY-GATE-REMOVED` (`_shared/gates/gate_removed.sh`), claiming its coverage transfers to `TOY-GATE-SURVIVOR` (`_shared/gates/gate_survivor.sh`). The transfer-run log at `_shared/transfer_runs/good_transfer_run.log` is REAL captured evidence (generated by actually running `gate_survivor.sh targets/has_pattern_x.txt` during this fixture's authoring — not fabricated): it shows `gate_survivor.sh` genuinely exits 1 (FAILs) on the exact target that used to trip `gate_removed.sh` (`BANNED_PATTERN_X`), which `gate_survivor.sh` 's own source confirms it was broadened to catch ("absorbed from gate_removed").

`gate_audit.py check-removal` MUST ACCEPT this removal — DEC-32's "recorded run showing the surviving gate FAILs on the removed gate's mutation" is satisfied by real, checkable evidence.
