Fixture: plan_struct_causes / golden-bad-count-mismatch

Identical to the golden-good fixture (every Class cell and every last-column cell populated, no per-row defect) except the §2.2 "Register counts" table states CONFIRMED = 3 while §2.1 actually contains exactly 2 CONFIRMED rows (RC-01, RC-02). Per contract plan-research-structural-check.md SC-C-001: "the class counts equal research.md §2.2" -- this fixture makes them disagree. Expected `causes` verdict: exit 1, naming the CONFIRMED class (stated 3, actual 2).

2 1

. Root-cause register

. Register table

RC	Cause	Origin	Class	Measured magnitude (named denominator)	Share of total cycle	Evidence	Settling evidence / what remains	Removed / measured by
RC-01	Fixture cause one	O1	**CONFIRMED**	1 of 1 fixture measurement	UNMEASURED	fixture evidence line one	settling note (T-X01)	T-X01
RC-02	Fixture cause two	O2	**CONFIRMED**	1 of 1 fixture measurement	UNMEASURED	fixture evidence line two	settling note (T-X02)	T-X02
RC-03	Fixture cause three	O3	**REFUTED**	fixture refutation note	n/a	fixture evidence line three	n/a	T-X03 (verification only, no removal task needed)
RC-04	Fixture cause four	O4	**UNDETERMINED**	fixture magnitude unmeasured	UNMEASURED	fixture evidence line four	settling evidence needed (T-X04)	T-X04

2 1

. Register counts (machine count over the Class column of § .)

Class	Rows	Row ids
CONFIRMED	3	RC-01, RC-02
REFUTED	1	RC-03
UNDETERMINED	1	RC-04
Total	**4**
