Fixture: plan_struct_causes / golden-bad-orphan

Identical to the golden-good fixture except RC-03's LAST column ("Removed / measured by") cell is EMPTY -- the row names no task at all. Per research.md's own §2 preamble (lines 164-166 of the real document): "Task ids in the last column refer to the phased plan in plan.md ... Every row is removed or measured by at least one task ... (no orphan cause, no orphan task -- checked mechanically by T-H08)." A row whose last cell is blank is an orphan cause at the register level -- detectable from research.md alone (no cross-reference to plan.md's own task list is needed for THIS check; that deeper bipartite cross-check against plan.md's actual tasks is SC-C-003, the separate `plan` subcommand). Expected `causes` verdict: exit 1, naming RC-03.
