T render_keys fixture — stale-key toy document (golden-bad)

Revision: 1 **Last modified:** 2026-09-29T00:00:00Z

This is a small, real toy Markdown document used ONLY as test-fixture data for T062's RED test (`test_render_keys_red.sh` , scenario `rk_stale_key_caught`). This file's content starts at v1 (matching `key_v1.json` 's recorded content-hash), is then genuinely edited to v2, but the recorded key sidecar is deliberately left un-updated (simulating the exact defect T-C12's freshness gate must catch: "a twin whose source changed but whose key was not updated"). The (currently absent) `docs/render_keys.py check` subcommand must, once T-C12 lands, recompute the CURRENT key from these real v2 bytes, compare it against the stale recorded key, and refuse/flag the mismatch.

Marker: RK-STALE-V1
