T render_keys fixture — touched-but-identical toy document

Revision: 1 **Last modified:** 2026-09-29T00:00:00Z

This is a small, real toy Markdown document used ONLY as test-fixture data for T062's RED test (`test_render_keys_red.sh` , scenario `rk_touched_identical`). Its bytes are NEVER edited by that scenario — only its mtime is touched (via `touch`) — so the test can prove, by a real `sha256sum` comparison before and after the touch, that mtime and content are genuinely DISTINGUISHABLE on this host: the file's mtime changes while its content stays byte-identical. This is the underlying mechanism a content-addressed key (T-C12) relies on to correctly report "no render needed" for exactly this case, in direct contrast to `rk_unchanged_today/` 's proof that the CURRENT, mtime-only freshness check wastefully re-renders it.
