Media Validator Skill

Purpose

Validates media files (MP4, PNG, TXT) by running OCR, metadata checks, and pattern matching against expected content. Returns PASS/FAIL with evidence.

Usage

```
bash skills/media-validator/media-validator.sh <file> [expected-pattern...]
```

Inputs

- `file` — path to an MP4, PNG, or TXT file
- `expected-pattern` — one or more grep/extended regex patterns expected in the extracted text

Outputs

- stdout: `PASS: <description> [evidence: <path>]` or `FAIL: <reason>`
- Evidence file at `qa-results/media-validator/<timestamp>-<basename>/`
- Exit 0 on PASS, 1 on FAIL, 2 on SKIP

Dependencies

- `tesseract` (optional — for OCR on images/video frames)
- `ffmpeg` (optional — for frame extraction from MP4)

- `ffprobe` (optional — for video metadata)
- `file` (for MIME detection)
